

Pelvic vs prostate-only radiotherapy in localized prostate cancer — random-effects meta-analysis of 5 randomized trials

a Overall survival

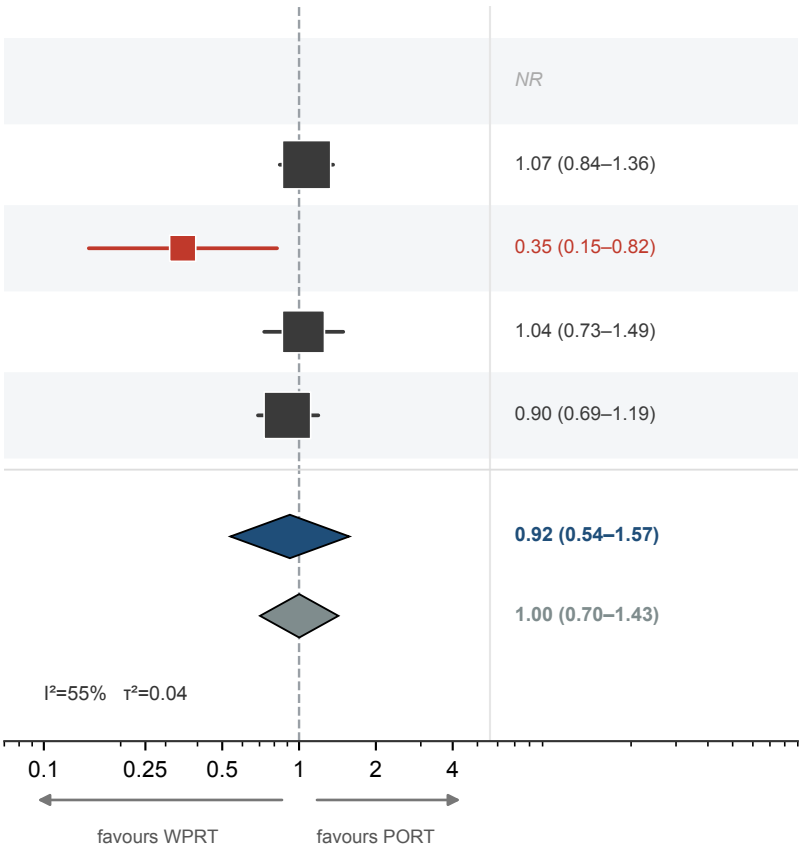

b Biochemical / progression

mixed defn: EFS / BCR / BFFS / BPPS

c Distant metastasis / MFS

mixed defn: DM vs MFS (PEACE-2)

Hazard ratio (95% CI), log scale. DL + modified Hartung-Knapp. Squares sized by study weight; POP-RT (red) drives heterogeneity. Biochemical & DM/MFS pool mixed endpoint definitions. NR = not reported. Arrowhead = CI beyond axis. HR<1 favours pelvic RT (WPRT).
