

Sensitivity analyses — pelvic vs prostate-only radiotherapy (pairwise random-effects MA)

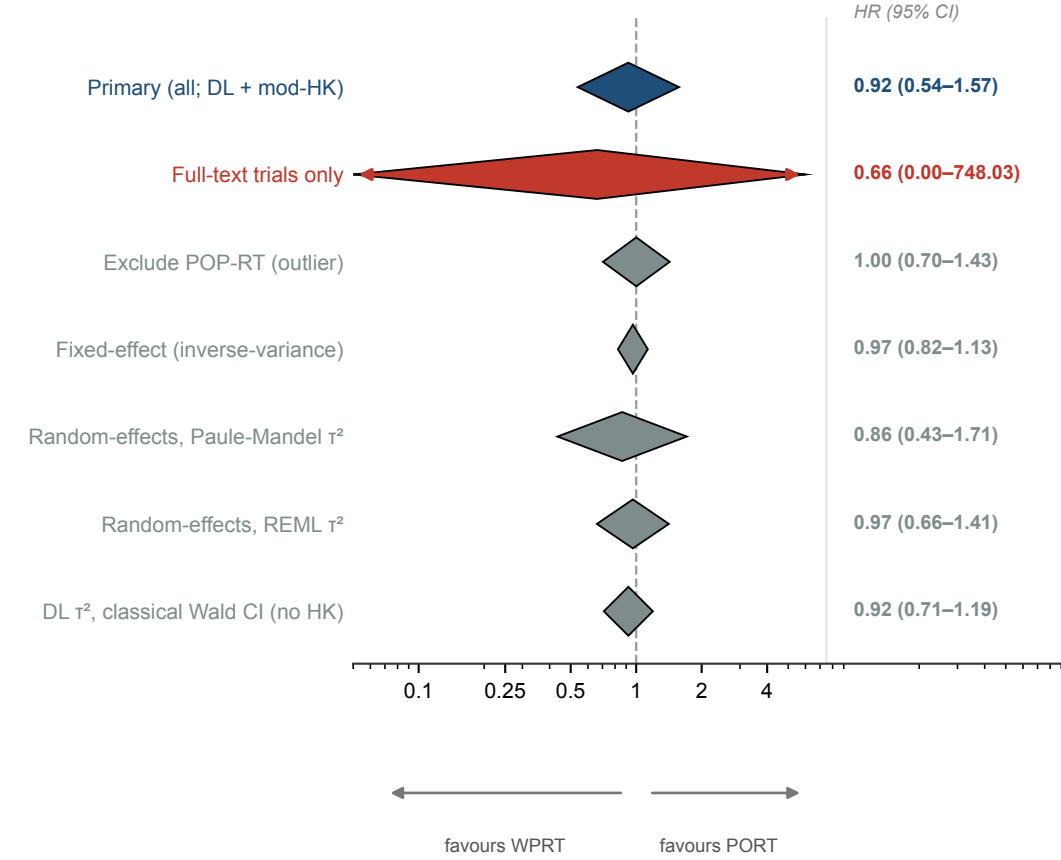

a Overall survival

b Biochemical / progression

c Distant metastasis / MFS

Hazard ratio (95% CI), log scale. Key sensitivity (red) = full-text trials only, i.e. excluding trials available only as congress presentations (PEACE-2 ASCO GU / ESTRO 2026 and RTOG 0924 ASTRO 2025). No funnel/Egger/meta-regression (invalid at $k=4-5$); robustness checks, not confirmatory. Arrowhead = CI beyond axis. HR<1 favours pelvic RT (WPRT).
